REASONS FOR ALLOWANCE

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 11/1/2004 has been entered.

The applicant's amendment filed 5/2/2005 to the Office action mailed 11/01/2004 has been entered. Claims 1-5 and 10-13 are pending.

2. The following is an examiner's statement of reasons for allowance:

Concerning claims 1-2 and 10-13, no prior art has been found teachings or suggesting the method for screening for agents that affect protein degradation rates, comprising expressing a different fusion protein in each cell within a population of cells, the fusion protein comprising a reporter protein and a protein encoded by a different sequences from a cDNA library, inhibiting the further expression of the fusion protein to allow the expressed fusion protein to degrade in the cell, selecting a subpopulation of cells from the population of cells, contacting the selected subpopulation of cells from previous step with a plurality of agents which may affect protein degradation rates and characterizing the fusion protein expressed by the selected cells for each agent.

Concerning claims 3-5, the method for monitoring effects different growth conditions have on expression of short-lived protein comprising the additional steps as to the method of claims 1-2 and 10-13. The additional steps are of exposing samples of cells to different growth

conditions, forming cDNA libraries from the samples of cell after exposure to the different growth conditions and forming a population of cells for each cDNA library.

The closest prior art is the reference of Kain et al. (6,306, 600, issued October 23, 2001). Kain et al. disclose a fusion protein comprising green fluorescent protein (GFP) as a reporter and short live protein, mouse ornithine decarboxylase (See column 2, lines 30-33) for studying protein degradation (See column 2, lines 13-18). Kain et al. do not disclose that the fusion protein comprises a reporter protein and a protein encoded by different sequences from a cDNA library and the steps of selecting a subpopulation of cells from the population of cells.

3. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
